When your team uses ChatGPT, OpenAI gets smarter. When they use Copilot, Microsoft gets smarter. **Your company gets nothing back.** *Nebbos changes that.*

+

YOUR CODE BRAIN, DAY ONE \$15M+ The Nebbos substrate — years of engineering across 20 repositories, 1.2M+ lines of production code — is what you inherit the day you deploy. Your Cradle then compounds on top of it.	ARCHITECTURE 3 tiers Cradle · Shell · Pearl. 20 canonical Pearl types. One compounding intelligence per tenant.	YOUR SUBSCRIPTION \$150 per user / mo · flat One flat price. Every seat, every capability. Billed annually with a 15% prepay discount, twenty-user minimum. Every seat includes a monthly AI Actions bundle; overage rolls into the same subscription in Nebbos tokens — a stable currency, decoupled from LLM providers' price swings. Storage	LIVE IN PRODUCTION Signal & Prediction Bayesian signal detection + calibrated prediction engine running production workloads. Shell intelligence + Actions on the 2026 roadmap.	⚠️ REGULATORY CLOCK EU Act · 2 Aug 2026 EU AI Act Article 16 obligations begin. Nebbos's Employee Transparency Portal ships against this deadline.

and add-ons on
separate lines.

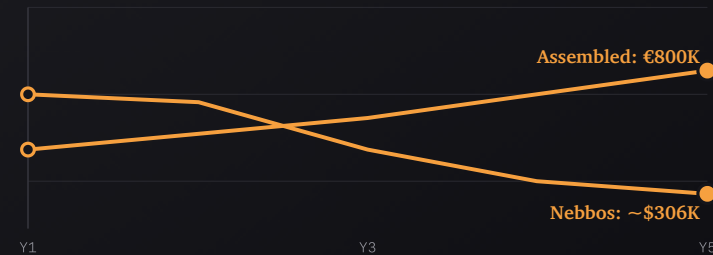

Frontier LLM prices collapsed 99.7%

GPT-4 \$30/M (Mar 2023) → Gemini Flash \$0.10/M (Apr 2026). Model layer is a commodity.

5-year math • assembled AI stack vs Nebbos

Illustrated at mid-market scale (~200 employees). Same shape at small-team and enterprise scale — see the three-scale summary tile.

WHAT NEBBOS IS

The infrastructure your company deploys. Not a chatbot. Not a SaaS you subscribe to. The entire architecture, code, and governance substrate - Cradle · Shell · Pearl - that you deploy as your own operating system. Your data. Your Cradle. Your brain.

WHY DEPLOY IT NOW

our value-migration research mapped the value migration. LLMs commoditized (99.7% price drop). Value moves to vertical data owners - Google, Meta, Bloomberg, Musk. Nebbos gives you the substrate to become the vertical data owner in *your* industry.

WHAT YOU GET IN FIVE YEARS • THREE SCALES

Three scales, same story. An assembled AI stack (Copilot + Cursor / Claude Code + ChatGPT Enterprise + custom LLM API + governance) rises with company size: ~€30-80K at small teams, ~€500K-1M at mid-market, ~€5-25M+ at enterprise. Nebbos is one flat price — \$150 per user per month — so the same three companies pay ~\$31K, ~\$306K, and ~\$3M+ per year. Every customer inherits the same \$15M+

code brain on day one; the Cradle
compounds on top.
